

ADARSH BABU K

Java Backend Developer | Microservices | Spring Boot | Kafka

Kochi, Kerala, India | +91 9544149013 | adarshbabuk42@gmail.com | [linkedin.com/in/adarshbabuk](https://www.linkedin.com/in/adarshbabuk)

PROFESSIONAL SUMMARY

Java Backend Developer with 4.8 years of experience designing, developing, and supporting scalable microservices, RESTful APIs, and Kafka-based event-driven systems in fintech and NBFC environments. Skilled in financial API integrations, secure file-based workflows, batch processing, and production support for high-availability back-office platforms. Experienced with Docker and OKD/OpenShift deployments, Redis caching, and Maven/Gradle builds. Strong in production troubleshooting, debugging and compliant backend solutions.

TECHNICAL SKILLS

Languages & Databases: Java, SQL

Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, JSF, PrimeFaces

Architecture & Messaging: Microservices, REST APIs, RESTful Services, Apache Kafka, Kafka Consumers, Event-Driven Architecture, API Integration, JSON, XML

Build, DevOps & Tools: Maven, Gradle, Azure Pipelines, Docker, OKD/OpenShift, Redis, Git, Linux, Postman, Swagger

Practices & Other: Secure API Integration, Angular

PROFESSIONAL EXPERIENCE

Geojit Technologies Pvt Ltd — Software Engineer

Dec 2024 – Present

SPARC – Enterprise Back-Office Platform (Fintech / NBFC)

- Designed, developed, and maintained scalable Java and Spring Boot microservices and REST APIs supporting core financial operations and regulatory compliance.
- Implemented Kafka-based event-driven workflows enabling reliable, asynchronous communication across distributed microservices.
- Integrated external financial systems (NSDL, CKYC) using secure token-based authentication, building fault-tolerant file upload and processing services with automated retry, recovery, and self-healing workflows.
- Automated batch jobs and schedulers for high-volume file processing and reconciliation, streamlining daily back-office operations.
- Migrated legacy modules to a microservices architecture, improving platform scalability and maintainability.
- Troubleshooted production issues on OKD/OpenShift through log analysis, API testing, and database queries, and deployed containerized services using Docker.

Telious Technologies — Software Developer

Dec 2021 – Aug 2024

- Developed and maintained Java-based enterprise web applications for diamond trading, inventory, and business data systems using JSF (PrimeFaces) and Spring Framework.
- Built role-based access control (RBAC), quotation, and promotional pricing modules, strengthening data security and streamlining sales workflows.
- Collaborated with cross-functional teams in Agile delivery to gather requirements, debug production issues, and release features on schedule.

PROJECTS

SPARC – Enterprise Back-Office Platform (Java, Spring Boot, Kafka, Docker, OpenShift, Redis, SQL): Modernized financial back-office operations and NSDL/CKYC compliance by replacing legacy, manual workflows with microservices, event-driven processing, and automated reconciliation; improved resilience through fault-tolerant, self-healing file processing.

PreMfg – Diamond Trading & Account Management (Java, Spring, JSF, PrimeFaces): Built core trading and account management features, replacing manual, spreadsheet-based tracking with a structured web platform.

Estock – Inventory Management System (Java, Spring): Delivered inventory, quotation, promotion, and RBAC features that improved stock tracking accuracy and secured access to business data.

PDS – Diamond Database System (Java, JSF, Spring): Implemented core business logic for data validation and processing rules, ensuring consistent enforcement of business rules across the platform.

EDUCATION

Bangalore University — Bachelor of Computer Applications (BCA)

2016 – 2019 | Karnataka, India

CERTIFICATIONS

Apache Kafka — LinkedIn Learning | Full Stack Java Development — Kompetenzen Technologies (Internship) | Java and Testing — ABC for Technology and Training, Bengaluru

ACHIEVEMENTS

- Led secure integration of NSDL and CKYC financial compliance systems, enabling automated, audit-ready regulatory workflows.
- Contributed to migration of legacy enterprise modules to a microservices architecture, improving scalability and maintainability.
